

## Revision Notes

### CHAPTER – 1

#### Integers

- Integers are a bigger collection of numbers which is formed by whole numbers and their negatives.
- You have studied in the earlier class, about the representation of integers on the number line and their addition and subtraction.
- We now study the properties satisfied by addition and subtraction.
  - (a) Integers are closed for addition and subtraction both. That is,  $a + b$  and  $a - b$  are again integers, where  $a$  and  $b$  are any integers.
  - (b) Addition is commutative for integers, i.e.,  $a + b = b + a$  for all integers  $a$  and  $b$ .
  - (c) Addition is associative for integers, i.e.,  $(a + b) + c = a + (b + c)$  for all integers  $a$ ,  $b$  and  $c$ .
  - (d) Integer 0 is the identity under addition. That is,  $a + 0 = 0 + a = a$  for every integer  $a$ .
- We studied, how integers could be multiplied, and found that product of a positive and a negative integer is a negative integer, whereas the product of two negative integers is a positive integer. For example,  $-2 \times 7 = -14$  and  $-3 \times -8 = 24$ .
- Product of even number of negative integers is positive, whereas the product of odd number of negative integers is negative.
- Integers show some properties under multiplication.
  - (a) Integers are closed under multiplication. That is,  $a \times b$  is an integer for any two integers  $a$  and  $b$ .
  - (b) Multiplication is commutative for integers. That is,  $a \times b = b \times a$  for any integers  $a$  and  $b$ .
  - (c) The integer 1 is the identity under multiplication, i.e.,  $1 \times a = a \times 1 = a$  for any integer  $a$ .
  - (d) Multiplication is associative for integers, i.e.,  $(a \times b) \times c = a \times (b \times c)$  for any three integers  $a$ ,  $b$  and  $c$ .
- Under addition and multiplication, integers show a property called distributive property. That is,  $a \times (b + c) = a \times b + a \times c$  for any three integers  $a$ ,  $b$  and  $c$ .
- The properties of commutativity, associativity under addition and multiplication, and

the distributive property help us to make our calculations easier.

- We also learnt how to divide integers. We found that,
  - (a) When a positive integer is divided by a negative integer, the quotient obtained is a negative integer and vice-versa.
  - (b) Division of a negative integer by another negative integer gives a positive integer as quotient.
- For any integer  $a$ , we have
  - (a)  $a \div 0$  is not defined
  - (b)  $a \div 1 = a$
